

Safe Storage Recommendations

Handle with Care:

Be careful and follow proper lifting and carrying techniques, and use the lifting straps provided.

Storage:

Ensure products are stored the correct way up on the end caps provided. (If you need anything specific, let us know.)

Protection:

Cover products with protective covers/sheets. Products are susceptible to dents and scratches and the foiling needs to be protected.

Elevate off the floor, if possible.

Store in a dry area.

Stack and Secure:

Stack products in a safe secure area, ensure not to stack too many in one location.

Toe and Heel:

With astragal bar windows, it's important to store the right side up (trickle vent at the top) as the glass may slip from the Toe & Heel position.

Labels & Identity:

Barcode labels contain job ref and location info. Store products together, separate from different jobs.

**Refer to our T&Cs for clarity if required.*
